

CoventBridge Assists Scientist in the War Against Coronavirus

What is Folding@Home?

[Folding@Home](#) is a distributed computing project that allows you to donate your spare computing cycles to assist in the fight against coronavirus. Citizen scientists volunteer to run simulations of protein dynamics on their personal computers to better understand the biology, how to minimize effects, and search for new therapeutic opportunities. Your donated spare computing cycles help process this data that simulates the reaction that the coronavirus may have to possible vaccines.

How it Works:

[Folding@Home](#) is simulating the dynamics of the coronavirus by allowing companies all over the world to donate spare computing cycles.

What is CoventBridge Doing?

CoventBridge is donating our unused company computing power to Folding@Home - join us in the fight!
